Analysis of Hummingbird Observations in California

PROJECT VISION

DATA EXPLORATION

What drives
hummingbirds to be at
these observed
locations?

WHAT ENVIRONMENTAL VARIABLES PLAY A ROLE?

Is there a relationship between air quality and hummingbird observations, specifically in California?

Do weather events impact hummingbird observations?

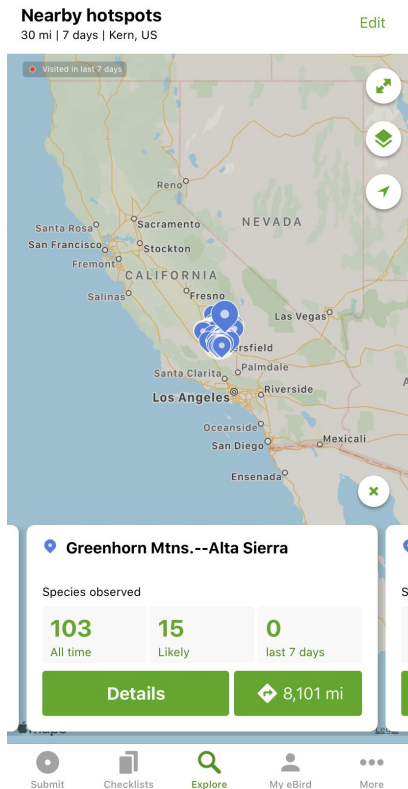

WHAT ABOUT
OTHER
VARIABLES?

eBird

The **Cornell** Lab of Ornithology

**California State
Association of Counties**

Global Biodiversity
Information Facility

DATA SOURCES

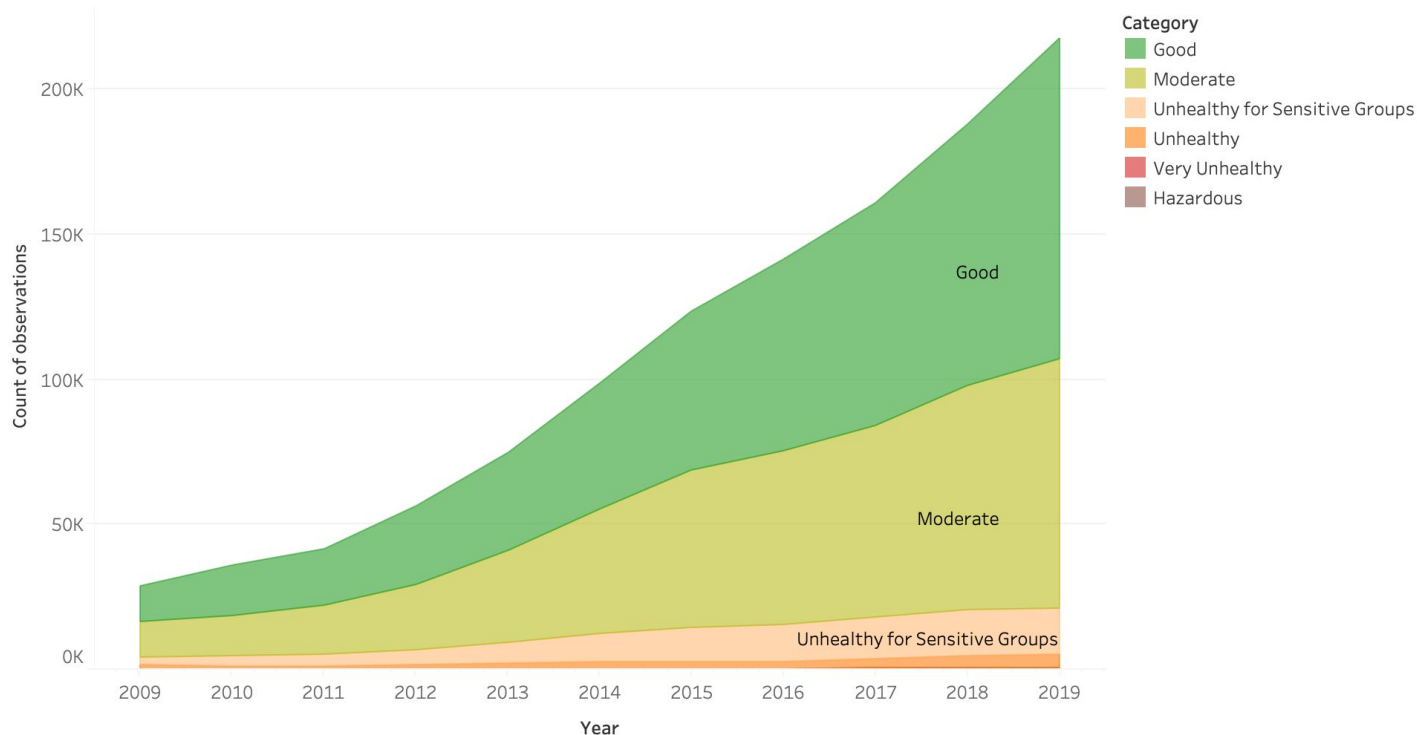

Rate of Hummingbird Observations on EBirds Over Time

The trend of count of bird_aqi_weather.csv for Date Year.

DATA EXPLORATION & ANALYSIS

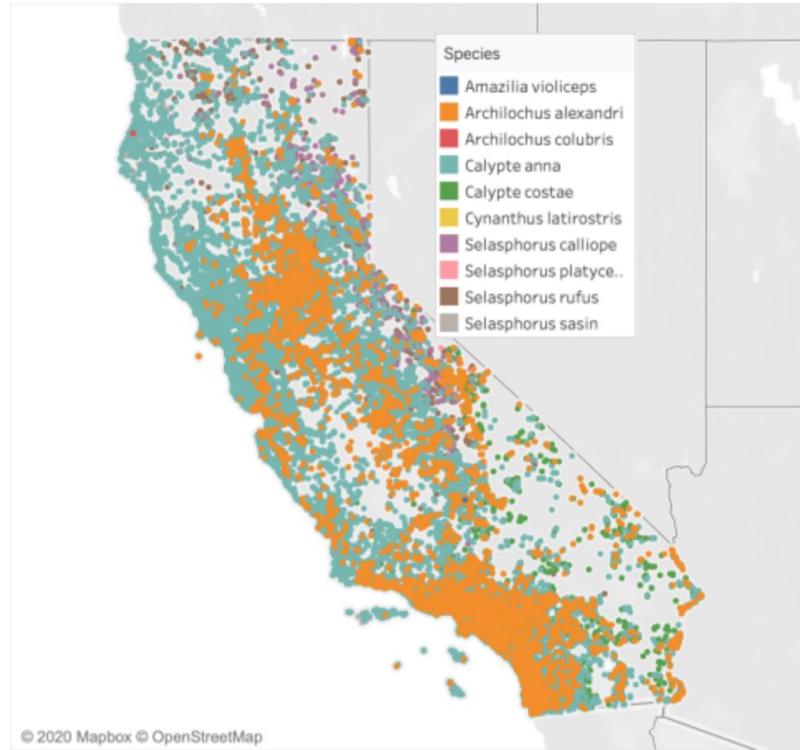

California Hummingbird Observation Average by Air Quality Category

The plot of Moving Average of Count of bird_aqi_weather.csv for Date Year. Color shows details about Category. The marks are labeled by Category.

DATA EXPLORATION & ANALYSIS

Hummingbird Observation Locations (2009-2019)

Map based on Longitude and Latitude. Color shows details about Species.

AVES

Analysis of hummingbird observations in California.

We took the hummingbird observation locations and classified them by county for analysis. Before we classified them, we mapped the observation locations to see a good distribution of the observed species.

From 2009-2019 we can see that the popularity of the eBird app has steadily grown. We will examine what hummingbird species users in California may expect to observe based on the AQI, population, county and weather attributes. To predict the observations, we examined population and AQI for the past hummingbird sightings.

Hummingbird Observations, AQI & Population in California (2009-2019)

In initial analysis we could see far more observations occurred during days with good AQI. While the overall observations grew, we can see that observations above a moderate AQI did not steadily grow.

California Hummingbird Observation Average by Air Quality Category

Hummingbird Observation Locations (2009-2019)

Map based on Longitude and Latitude. Color shows details about Species.

The final dataset was tested with different machine learning models with sklearn. Accuracy scores were compared and the logistic regression model was used for the prediction model to predict the species of hummingbird likely to be observed based on input features.

	Linear Discriminant Analysis	Decision Tree	Decision Tree with Max Depth	Logistic Regression
Training Accuracy Result	0.70808	0.73276	0.72127	0.7191
Testing Accuracy Result	0.70925	0.71317	0.723	0.72015

HUMMINGBIRD PREDICTOR

Enter Air Quality Index (0-250)

Enter Year (2009-2019)

Enter Population

FUTURE ANALYSIS

- > Obtain and add bird observation data from more resources, i.e., U.S. Fish & Wildlife Service
- > Expand analysis to more sentinel bird species and/or expand locations.
- > Analyze more features such as temperature, microclimates and different land uses.

WHAT WOULD
WE DO
DIFFERENTLY?
